FIELD NOTES

From a brief to a live website

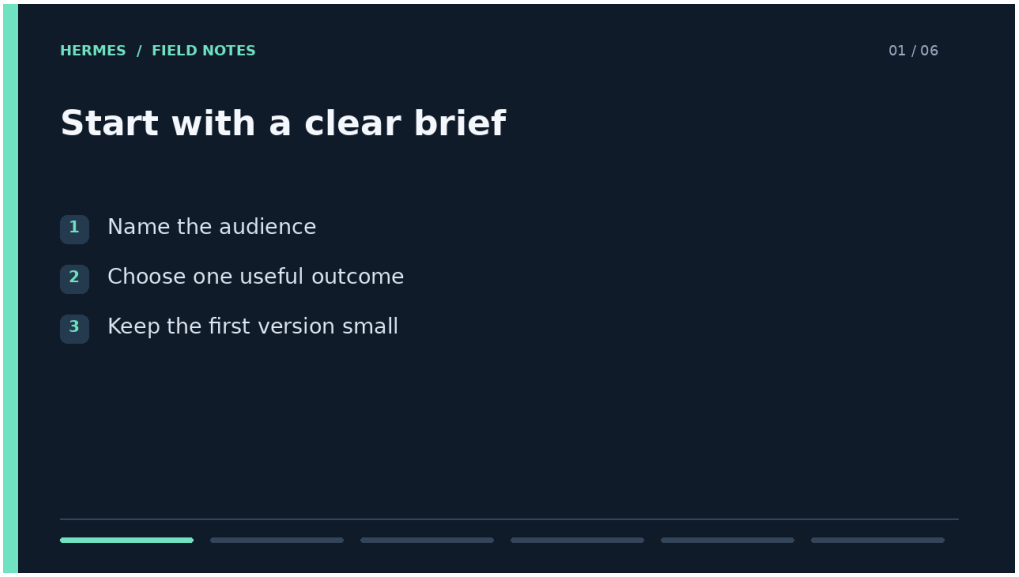

A practical guide from idea to published result

Hermes / Common DevOps | Demonstration

Start with a clear brief

A website begins with a clear brief. Tell Hermes who the page is for, what it should explain, and what visitors should do next. A small first version is easier to review.

- Name the audience
- Choose one useful outcome
- Keep the first version small

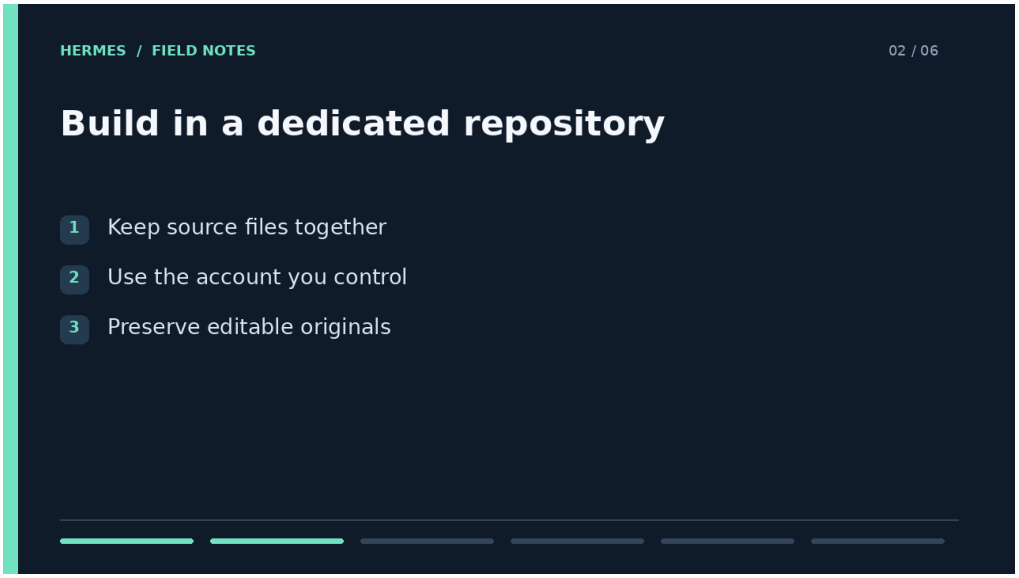

Start with a clear brief

Build in a dedicated repository

Hermes prepares the page and its assets in a dedicated repository. The source stays editable, and each change becomes part of a

recorded history. Demonstration material contains no private documents.

- Keep source files together
- Use the account you control
- Preserve editable originals

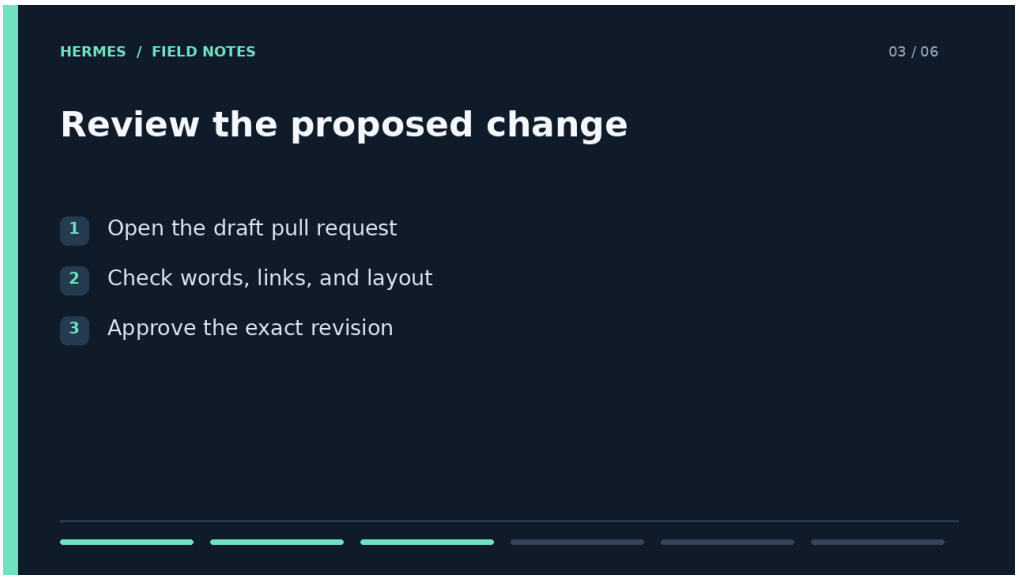

Build in a dedicated repository

Review the proposed change

Before publication, Hermes opens a draft pull request. Review the wording, links, and layout. Approval applies to the exact revision, so later changes must return for review.

- Open the draft pull request
- Check words, links, and layout
- Approve the exact revision

Review the proposed change

Publish the approved revision

Once approved, the change is merged. GitHub Pages builds the website from the main branch. A successful merge starts publication, but does not prove that the new page is live.

- Merge the reviewed files
- Pages builds the website
- Wait for the deployment result

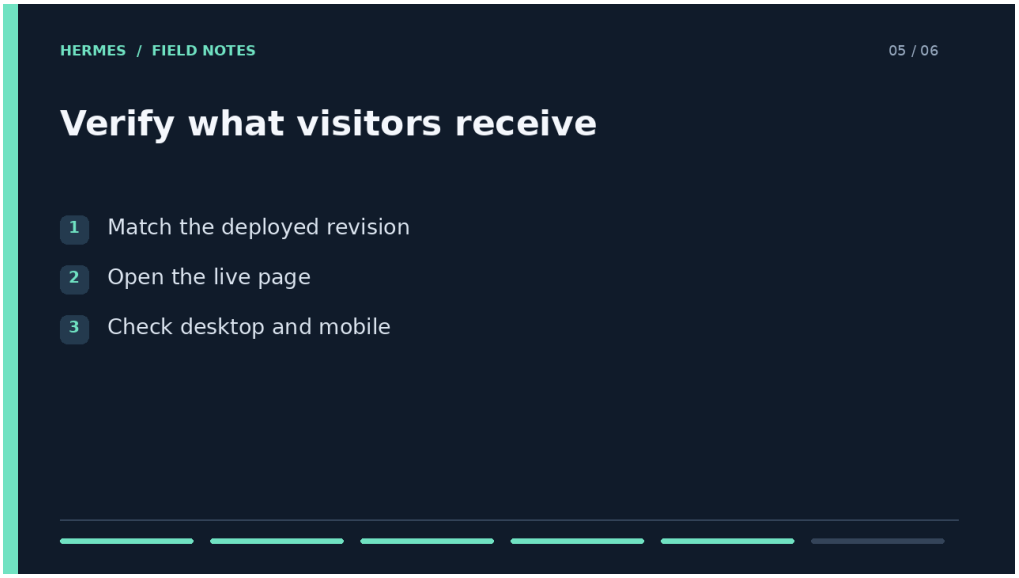

Publish the approved revision

Verify what visitors receive

Verification connects the deployment to the reviewed revision. Open the live page, check its contents, and test its links and layout on desktop and mobile. Save that evidence with the release.

- Match the deployed revision
- Open the live page
- Check desktop and mobile

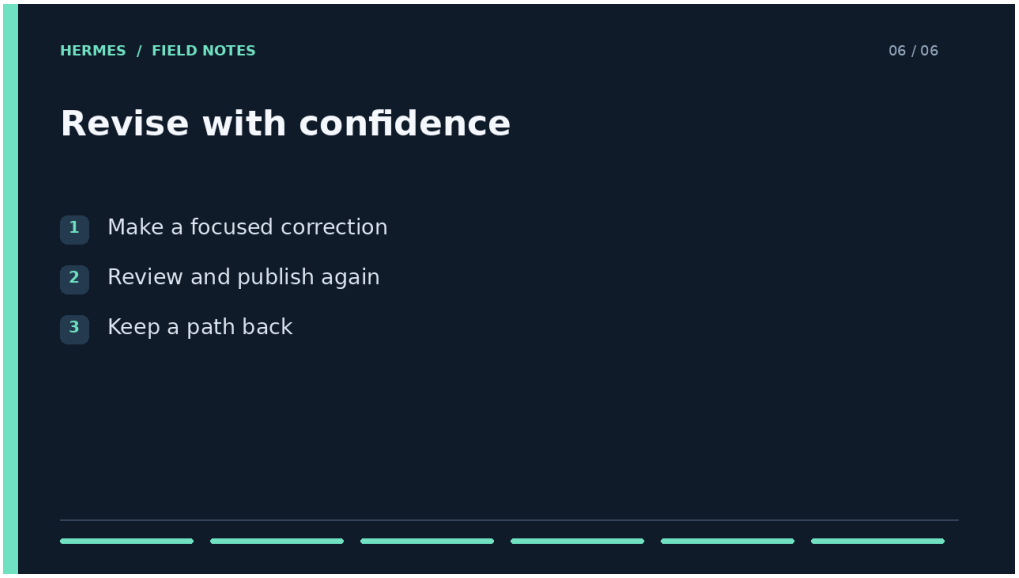

Verify what visitors receive

Revise with confidence

A correction follows the same path: edit, review, approve, publish, and verify. Earlier revisions remain available, so a deliberate revert can restore the previous website without rebuilding it from memory.

- Make a focused correction
- Review and publish again
- Keep a path back

Revise with confidence
